

PROJECT HELIOS

Solar & Storage Investment Committee Submission

250 MWac solar PV + 100 MW / 200 MWh BESS | Thailand

SYNTHETIC POC DATA
June 2026

All names, facts and figures are illustrative and not for investment decision-making.

Executive recommendation

TRANSACTION

- Approve progression to final documentation for an 80% controlling stake.
- Strategic entry into Thailand solar-plus-storage with 70% contracted revenue.
- Deck headline equity IRR: 14.6%; total project cost: USD 285m.
- Key conditions: grid-cost confirmation, merchant-curve support and permit closure.

Transaction and governance

TRANSACTION

- 80% Group / 20% local development partner.
- Three of five board seats and reserved-matter protections.
- Enterprise value: USD 276m.
- Development partner remains responsible for local execution through COD.

Strategic fit

TRANSACTION

- Priority technology: utility-scale solar and storage.
- Priority growth geography: Southeast Asia.
- Creates optionality over two adjacent pipeline sites.
- Portfolio concentration impact not quantified in this submission.

Asset and development status

ECONOMICS

Solar capacity

250 MWac / 320 MWp

BESS

100 MW / 200 MWh

Deck COD

30 Jun 2028

Deck net capacity factor

25.5%

Deck net generation

558 GWh

- Core generation licence obtained.
- Grid easements and two local construction permits remain open.
- Single-wrap EPC contract under negotiation.

Revenue model

ECONOMICS

Contracted share

70%

Merchant share

30%

Deck PPA price

USD 60/MWh

PPA term

20 years

BESS revenue

**Capacity + shifting + ancillary
services**

- Independent merchant curve referenced but not appended.
- Payment-security package remains under negotiation.

Financial returns

ECONOMICS

Total project cost

USD 285m

Project IRR

10.4%

Equity IRR

14.6%

NPV

USD 40m

Minimum DSCR

1.35x

EV / EBITDA

9.3x

- Values shown are management headline figures.
- Detailed workbook contains different values for selected metrics.

RISK REVIEW

Senior debt

65% of cost

Equity

35% of cost

Interest rate

6.4%

Debt tenor

15 years

- Hedging to be executed at financial close.
- Debt term sheet remains indicative.

Sensitivity results

RISK REVIEW

Merchant price -15%

12.2% equity IRR

Generation -5%

12.6% equity IRR

Capex +10%

11.8% equity IRR

COD delay 6 months

11.9% equity IRR

- Combined downside not shown.
- Battery augmentation sensitivity not shown.

Principal risks and mitigants

Risk	Rating	Mitigation / status
Grid cost / schedule	High	Utility design review and contingency
Merchant exposure	Medium-high	70% contracted revenue
BESS degradation	Medium-high	Warranty; augmentation not modelled
Offtaker credit	Medium	Payment security under discussion
Land / permitting	Medium	Open easements and permits
Cybersecurity	Not assessed	No dedicated assessment

Decision and conditions

DECISION

- Approve progression, subject to metric reconciliation across all documents.
- Obtain independent merchant-price and offtaker-credit support.
- Run combined downside and BESS augmentation sensitivities.
- Cap grid, overhead and advisory costs.
- Close land, permit, cyber and decommissioning actions.
